

Environment Monitoring and Analysis Training Program

Spectro is playing a vital role in imparting awareness on issues related to environment by conducting training programs which offers a framework to establish an Environmental Management System (EMS). Under this course, the trainee learns all the techniques to carry out air, water and soil sampling and gets an overview of the importance to meet the requirements of specified National and International Standards. The training program is open for those who want to strengthen their skills in areas like quality, health, performance and safety.

Objective of the Training:

The objective of this training is to provide full knowledge to diagnose and supervise the requirements to promote the environmental policies and strategies and to become determined about the aspects of environment and its impact to decide "what to manage and how to manage". The role of management system towards environmental safety is described and superior ways to carry out production without harming the environment is suggested. We improve personal competence and skills of an individual to develop best solutions for the sake of environment.

Training module for 10 days:

The training is carried out in-house as well as on-site as per the module.

In-House training:

Day 1: Introduction to related specifications and various test methods and the need to meet the requirements.

Day 2: Hands-on instruments: Working with their applications.

Day 3: Air Monitoring of ambient air and indoor air in industrial work and offices.

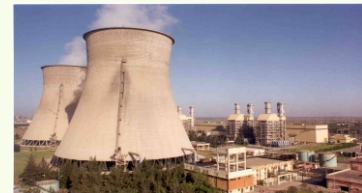

Day 4: Analysis of Air Noise stack.

Day 5: Analysis of samples of ground water.

Day 6: Analysis of samples of drinking water.

Day 7: Testing of soil samples.

Day 8: Analysis of soil samples.

On-Site training:

Day 9: Sampling procedure to analyze ambient noise, machine noise and Advance Air Quality (AAQ).

Day 10: Sampling procedure for analysis of soil, water, stack and indoor air.

Benefits of the Training:

This training is meant for those who want to set their career in environment related field. After this training an individual becomes open to various industries where environmental monitoring is done. The scope for this field is getting wide at a great scale and providing opportunities to the new comers for in testing fields related to air, water and soil.

Please Note:

- * We also conduct customized training programs on request.
- * The certificate will be provided only after clearing a test.
